

The World's Most Flexible Microvolume Spectrophotometer

..is now the world's most sensitive

DeNovix EasyApps® Version 3.00

The DeNovix DS-11 Series Spectrophotometer / Fluorometer now features industry leading sensitivity for nucleic acid and protein detection. EasyApps V3.00 employs proprietary algorithms to enhance the UV-Vis detection limit of 1µL samples.

- **Microvolume UV-Vis**
 - 0.75 ng/µL dsDNA
 - 0.04 mg/ml BSA
- **Fluorescence Quantification**
 - 0.5 pg/µl dsDNA
 - 12.5 µg/ml BSA

The software also includes new **SmartQC** sample contamination guidance. SmartQC monitors every sample measured for the presence of common contaminants, highlights these samples to the user and advises on potential issues. SmartQC also solves the problem of samples being left to dry on the measurement surface by monitoring the sample measurement and cleaning process and warning if a sample has not been removed.

Recommended by Scientists Worldwide

“ I love it, because of the accuracy and convenience. ”

Rating: 5.0 ★★★★★

“ The machine is excellent. I strongly recommend it to others ”

Rating: 5.0 ★★★★★

“ It's convenient to use with high accuracy results. ”

Rating: 5.0 ★★★★★

“ Best machine in my lab. ”

Rating: 5.0 ★★★★★
